

2WINNY
"Mask" Kit

A young child with curly hair is looking at a colorful lion-shaped mask held by an adult. The mask is white with a yellow face, large black eyes, and a red mouth. It has a large orange and yellow mane. The child is pointing at the mask with their right hand. The background is blurred, showing what appears to be a clinical or office setting.

2WINNY draw kid's attention on the 2WIN before starting the examination and activating the visible and audible fixation target.

Checking kid's refraction can be a great deal of fun.

The 2WINNY "Mask" Kit is the new tool to help the operators in daily interactions with infants and children. It is designed to "dress" the 2WIN in order to make it more attractive and funny for infants and children.

2WINNY draw kid's attention on the 2WIN before starting the examination and activating the visible and audible fixation target.

Mask depending upon child age

The operator selects the mask depending upon child age and inserts it on the 2WIN front side. The time required to get refraction and many other vision parameters is only 3 seconds.

 0-12	Infants From 0 to 12 Months			
 1-3	Toddlers From 1 to 3 Years			
 3-6	Children From 3 to 6 Years			

Any Kit is composed by:

-  A folder
-  9 masks on the basis of age-related shapes and colors (0-1//1-3//3-6)
-  225 stickers in all (25 stickers for mask)

Refraction and vision measurements can be
funny and useful at the same time!

The kit can be ordered sending an email to Adaptica distributors or to
info@adaptica.com
